Report: Show total revenue per month

Here's an explanation of the findings:

*   The analysis ran successfully, but it didn't return any revenue figures for any month.
*   This suggests there might not be any sales data recorded in our system for the period we were looking at.
*   Alternatively, there could be a temporary issue accessing the sales information, or it might be stored under a different name than anticipated.
*   To proceed, we might need to confirm if there were sales during the timeframe in question or check if the revenue data is located elsewhere.
